

VISION ART ALUMINIUM

VISION ART ALUMINIUM

Vision Art Aluminium introduces an innovative line of architectural wall systems crafted for office environments characterized by creativity and transparency. The Vision demountable wall system embodies a blend of clean, European aesthetics and a comprehensive range of acoustic performance. Featuring various glass fascia configurations, complemented by matching wall and door pairings, Vision ensures both visual and acoustic continuity. The precision-cut frame and trim components contribute to a seamless appearance, creating a strong architectural presence. Vision is dedicated to a fully customized approach to architectural interior space planning, supporting LEED® initiatives and occupant health through thoughtful design and materials. It strikes a balance between the need for enclosure and acoustic privacy, all while promoting a sense of openness and providing full access to natural light.

Introducing our Vision Art Aluminum frameless office partition—a revolutionary blend of minimalistic elegance and functional design, meticulously crafted to redefine your workspace aesthetic.

Explore a World of Possibilities with Vision Art Aluminum's Swing Doors and Diverse Door Handle Palette

Step into a realm of design freedom with Vision Art Aluminum's swing doors. We understand that every detail matters, especially when it comes to door handles. That's why we offer a diverse and extensive palette of door handle options, empowering you to tailor your space to perfection. Discover a seamless fusion of functionality and aesthetics as you embark on a journey to personalize your doors and elevate your design criteria with Vision Art Aluminum.

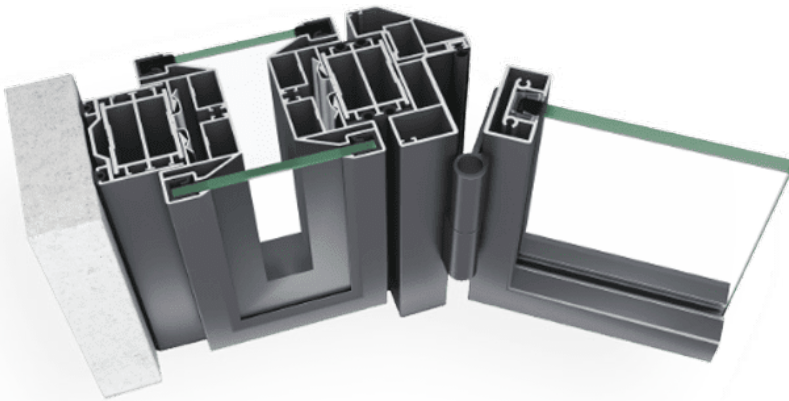

VISION ART ALUMINIUM

Harmonious Silence Vision Double Glazed Series

The Vision double glazed series stands as a testament to refined design and acoustic mastery, setting a benchmark for the modern workspace.

Acoustic Excellence Immerse yourself in a realm of tranquility. The Vision double glazed series boasts an extraordinary STC rating of up to 48, ensuring your workspace becomes an acoustic oasis of focus and productivity.

VISION ARCHITECTURAL GLASS WALL SYSTEMS

Sound insulation in office partitions plays a crucial role in creating a conducive and productive work environment. While privacy is essential, effective communication within designated areas is equally important. Sound insulation helps create separate zones for collaboration, ensuring that discussions in meeting rooms or collaborative spaces don't disturb the general office atmosphere.

The thickness
of the
glass is up to 22 mm

Soundproofing
up to
48 decibels

The image shows a modern office environment. In the foreground, there's a glass partition wall system with a black frame. Behind it, a conference room is visible, featuring a long dark table, several orange and grey chairs, and a checkered floor. The ceiling has track lighting. The background shows more office space with desks and chairs.

In this dynamic partnership, Dormakaba's renowned Germannengineering takes center stage, infusing each element with unmatched precision. From handles to hinges, our workspace solutions are now elevated by the legacy of Dormakaba's expertise.

The all-glass partition walls combine maximum transparency with "high" cost effectiveness without the high cost. Its foundation consists of a variable aluminum floor and ceiling profile that can support a number of different types of glass. Glazed profiles are easy to install and allow building tolerances. You can choose from a variety of sliding and hinged door elements made of glass or wood with aluminum or wood block frames.

Glass to Glass Connection

Precision-fitted glass-to-glass joints can be connected with an adhesive tape or clear plastic connectors.

Hardware Ladder Pull

Ladder Pull is compatible with pivot and barn doors and is offered in stainless and painted finishes.

Wall and Door Pairing

Framed Pivot Doors can be specified with single or double glass to match the acoustic configuration of Focus walls. Optional drop seals provide added acoustic privacy.

Focus the Transition

Inline transitions to demising walls permit enhanced functionality as needed.

Hardware Handle

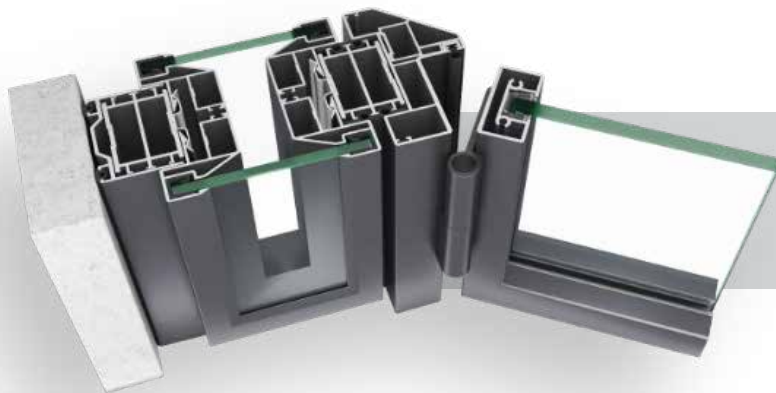

Advanced lock hardware on doors complies with specific building code requirements. To provide a consistent aesthetic, hardware patches match any Focus frame finish.

Articulating Wall Start

The articulating wall start allows glass fascias to connect to architectural walls at an angle .
